Screen Inventory

Product 2 — Elevator Pitch Script Check

by AutomagiKal · March 2026 · Confidential

About this document

This document defines every screen in the Elevator Pitch Script Check product (Product 2), in the order a user encounters them. For each screen it specifies the screen name, URL route, purpose, all information and content displayed, navigation elements, and every primary and secondary action available.

This document is a companion to the Pitch Deck Analyser Screen Inventory, the User Flow diagram, and the Technical Specification. Screens 01–05 (Landing Page through Dashboard) are shared with all products and are documented in full in the Pitch Deck Analyser Screen Inventory. They are summarised here for reference only, with any product-specific differences noted.

Product summary

Product name	Elevator Pitch Script Check
Module	Module 2 (M2) × 2 cycles
What it does	User submits their written elevator pitch script via upload or paste, receives element-by-element AI feedback including scores, excerpts from their own script, and a rewrite suggestion per element. They refine externally and submit again for a second cycle. Provides before-and-after evidence of improvement.
AI engine	Claude Sonnet 4.6 (Anthropic)
Input formats	PDF · DOCX · DOC · TXT · MD · Keynote (.key) · plain text paste
Total screens	11 screens across the full two-cycle journey (Screens 01–05 shared with all products)
Route prefix	/dashboard/elevator-script

A note on Keynote (.key) files

Keynote files (.key) are accepted as an input format for the Elevator Pitch Script Check. Because this product evaluates written script content rather than visual slide design, the platform extracts all text from the Keynote file — slide titles, body text, and speaker notes — and treats this as the script for analysis. Visual slide elements (images, charts, layout) are not evaluated in this product. Users who want visual design feedback on a Keynote deck should use Product 1 (Pitch Deck Analyser) or Product 4 (Pitch Deck Live), both of which also accept Keynote files.

Screen map — order of screens

#	Screen Name	Route	Notes
01	Landing Page	/	Shared — see Pitch Deck Analyser inventory
02	Create Account	/register	Shared — country collected here
03	Verify Email	/verify-email	Shared
04	Browse Products & Pricing	/pricing	Shared — Product 2 card highlighted
05	Dashboard	/dashboard	Shared — M2 counter shown: used/remaining/purchased
06	Module Entry — Input & Name	/dashboard/elevator-script/new	Cycle 1 and Cycle 2 use same screen
07	Analysis in Progress	/dashboard/elevator-script/analysing	Processing state — no user input
08	Feedback Report	/dashboard/elevator-script/session/[id]	Full report — Cycle 1 and Cycle 2
09	Session History	/dashboard/history	Shared across all modules
10	Session Comparison	/dashboard/elevator-script/compare/[id1]/[id2]	Cycle 1 vs Cycle 2 delta view
11	Add-on / Upsell	/dashboard/elevator-script/upgrade	Shown when counter reaches 0

Screens 01–05 — Shared platform screens

Screens 01 through 05 (Landing Page, Create Account, Verify Email, Browse Products & Pricing, and Dashboard) are identical across all five products. They are documented in full in the Pitch Deck Analyser Screen Inventory. The notes below record only the differences relevant to Product 2.

Screen	Product 2 specific difference
01 Landing Page	No change. All products presented equally on the homepage.
02 Create Account	No change. Country is collected here for all products.
03 Verify Email	No change.
04 Browse Products & Pricing	The Elevator Pitch Script Check card is visible alongside all other products. No specific visual emphasis unless configured. Input formats (including Keynote) are listed in the product card feature list.
05 Dashboard	The entitlement panel shows the M2 counter: X used / Y remaining / Z purchased. The "Start session" CTA routes to /dashboard/elevator-script/new. The suggested next step is contextual to M2 activity.

Screen 06 Module Entry — Input & Name Session</dashboard/elevator-script/new>

PURPOSE	
What this screen does	• Entry point for both Cycle 1 and Cycle 2 of the Elevator Pitch Script Check. • User names the session, provides their script via upload or paste, and submits for analysis. • The same screen is used for both cycles. The cycle indicator and counter update accordingly. • For Cycle 2, the screen surfaces the top priority actions from Cycle 1 to confirm the user has addressed the feedback.
PAGE STRUCTURE & CONTENT	
Page heading	Elevator Pitch Script Check
Cycle indicator	• Shows which cycle the user is on: "Session 1 of 2" or "Session 2 of 2" • Remaining counter: "1 session remaining after this one" or "This is your final session"
Framework reference panel	• Collapsible panel — open by default on first visit, collapsed on return • Heading: "What we evaluate" • The 5-element framework listed with a one-line description of each element: – Hook — grabs attention in the opening line – Problem — clearly identifies the problem being solved – Solution — explains what you offer and how it solves the problem – Proof — provides a credibility signal or evidence of traction – The Ask — states clearly what you want from this conversation • Note: "Your script will be scored against each element. You'll see your excerpt, a score, feedback, and a rewrite suggestion for each." • Estimated duration guidance: "Most effective elevator pitches run between 45 and 90 seconds. That's roughly 120–200 words."
Session name field	• Label: Name this session • Placeholder: e.g. "Investor pitch v1" or "Leadership meeting — March 2026" • Required — submit button disabled until this field has content • Maximum 80 characters • Pre-populated with "Elevator Pitch [date]" as a default suggestion
Input method tabs	• Two tabs displayed side by side: – Tab 1: Upload a file (default active on first visit) – Tab 2: Type or paste your script • User can switch freely between tabs before submitting — switching clears the other tab's content • Only one input method can be active per submission
Tab 1 — Upload a file	• Large drag-and-drop zone with dashed border • Label: Drag your script here, or click to browse

	- Accepted formats listed clearly below the zone: - PDF (.pdf) - Word document (.docx, .doc) - Plain text (.txt) - Markdown (.md) - Keynote (.key) — text extracted from slides and speaker notes - Maximum file size: 10MB - Upload progress bar appears on file selection - On successful upload: filename displayed with green tick, file size shown, Remove button - Keynote note shown on .key file selection: "We'll extract all text from your slides and speaker notes for analysis."
Tab 2 — Type or paste your script	- Large text area, minimum 6 rows, expands with content - Placeholder: "Paste your elevator pitch script here, or type directly..." - Live word count displayed below the text area: "X words · estimated Y seconds spoken" - Estimated duration updates in real time as the user types - Character limit: 5,000 characters - Character count shown when within 500 characters of the limit
Validation states	- Unsupported file format: "Only PDF, DOCX, DOC, TXT, MD, and Keynote (.key) files are supported" - File too large: "File exceeds the 10MB limit" - Empty text area on submit: "Please enter your script before analysing" - Script too short (under 20 words): "Your script seems very short. Are you sure you're ready to submit?" — warning, not a blocker
Cycle 2 — previous session reminder	- Visible only on Cycle 2, above the input area - Heading: "In your first session, your top priority actions were:" - The 3 priority actions from Cycle 1 displayed as a numbered list - Sub-note: "Have you addressed these in your revised script? Submit when you're ready." - Link: "Review your full Cycle 1 report" → /dashboard/elevator-script/session/[cycle1-id]
ACTIONS	
Primary action	Analyse Script — disabled until session name AND script content provided → submits and navigates to Screen 07 (Analysis in Progress)
Secondary actions	- Remove uploaded file → clears upload zone, no session use consumed - Switch between Upload / Paste tabs → clears the other tab's content - Collapse / expand framework reference panel - Review Cycle 1 report (Cycle 2 only) → /dashboard/elevator-script/session/[id] - Back to Dashboard → /dashboard (no use consumed if file not yet submitted)
NOTES & RULES	

Rules	• A session use is only consumed when Analyse Script is clicked and the content is successfully submitted to the AI. • Keynote (.key) files: text is extracted from slide bodies, titles, and speaker notes server-side. The extracted text is shown to the user in a preview panel before submission so they can confirm the right content was captured. • DOCX files are parsed in-browser using Mammoth.js for text extraction. DOC files are converted server-side. • PDF files are passed directly to Claude as a document object — no intermediate extraction. • If the user navigates away before clicking Analyse Script, no use is consumed and no session is created. • If the user has 0 remaining uses and navigates to this route, they are redirected to Screen 11 (Add-on / Upsell).
-------	---

Screen 07 Analysis in Progress

/dashboard/elevator-script/analysing

PURPOSE	
What this screen does	Processing state shown while Claude is analysing the submitted script. No user input is possible. The user can leave and return — the report will be in Session History when ready.
PAGE STRUCTURE & CONTENT	
Status heading	• Heading: Analysing your pitch... • Sub-heading: This usually takes about 30 seconds. Hold tight.
Progress animation	• Animated progress indicator (pulsing dots or animated ring) • Not a percentage bar — analysis time is not deterministic
Status messages	• Rotating messages showing what Claude is doing, e.g.: – "Reading your script..." – "Identifying your Hook, Problem, and Solution..." – "Scoring each element against the framework..." – "Writing your rewrite suggestions..." – "Calculating your estimated spoken duration..." – "Preparing your report..."
Leave and return message	• "You can leave this page — your report will be waiting for you in Session History when it's ready."
Error state	• Heading: Something went wrong • "We couldn't complete the analysis. Your session has not been counted. Please try again." • Retry button • Contact support link
ACTIONS	
Primary action (error state only)	• Try again → re-submits the same content without consuming an additional session use

Secondary actions	- Return to Dashboard → /dashboard (analysis continues in background) - Contact support → /support (error state only)
NOTES & RULES	
Rules	- No session use is consumed if the API call fails. The counter only decrements on a successful analysis response. - Timeout threshold: 30 seconds. If exceeded, error state is shown. - If the user navigates away, analysis continues. On return to /dashboard the session appears in Recent Activity.

Screen 08 Feedback Report

/dashboard/elevator-script/session/[id]

PURPOSE	
What this screen does	- Displays the full AI feedback report for a completed session. - Used for both Cycle 1 and Cycle 2 reports. The Cycle 2 report includes a score delta comparison against Cycle 1. - User can save, download, add notes, and share the report from this screen.
PAGE STRUCTURE & CONTENT	
Report header	- Session name (editable inline) - Module: Elevator Pitch Script Check - Date and time of analysis - Cycle indicator: Session 1 of 2 / Session 2 of 2 - Input method used: Uploaded file ([filename]) or Pasted text - Overall score: large numeral (0–100), colour-coded (green 70+, amber 40–69, red below 40), with label
At-a-glance stats bar	- Word count: [X] words - Estimated spoken duration: [X] min [Y] sec - Duration indicator: within target range (45–90 sec) / too short / too long — with colour coding - Tone summary: one-word descriptor e.g. "Confident" / "Tentative" / "Formal"
Executive summary	2–3 sentence plain-English overview of the script's overall condition - Generated by Claude, specific to the submitted script - Includes the most important thing to do before Cycle 2 (Cycle 1 report only)
Priority action list	- Heading: Your top 3 actions - Numbered list, 1–3, in order of priority/impact - Each action is specific, references a named element, and is immediately actionable - Visually prominent — coloured background panel
Element-by-element analysis section	Heading: Script breakdown — element by element

	• Five elements displayed in framework order: Hook · Problem · Solution · Proof · The Ask • Per element: – Element name with icon – Status badge: Found / Not found – Score 0–100 with colour-coded progress bar – Your words — excerpt from the script that maps to this element, shown in a visually distinct quoted block – "Not found" elements show: "We couldn't identify this element in your script. See the rewrite suggestion below." – Feedback: 2–3 specific sentences about this element – Suggested rewrite — a concrete alternative version of this element, clearly labelled and in a distinct background panel – Score delta badge (Cycle 2 only): e.g. "+15 from Session 1"
Tone analysis section	• Heading: Tone & delivery impression • Three dimensions scored and described: – Clarity — how easy is the script to follow? – Confidence — does the language project confidence? – Conciseness — is every word earning its place? • Per dimension: score + 1–2 sentence feedback • Overall tone descriptor: e.g. "Polished and direct" / "Enthusiastic but unclear"
Original script panel	• Collapsible panel — collapsed by default • Heading: Your submitted script • The full text of the submitted script displayed in a read-only text panel • Allows the user to reference their original words while reading the feedback • For Keynote files: shows the extracted text that was analysed, with a note confirming the source
Session comparison panel (Cycle 2 only)	• Heading: Your improvement • Side-by-side overall scores: Session 1 vs Session 2 • Overall delta shown prominently: e.g. "+22 points overall" • Per-element score comparison table: element name / Session 1 score / Session 2 score / delta • Improvement narrative: 2–3 sentences summarising what changed most
Notes field	• Plain text input, max 1,000 characters • Label: Add notes to this session • Saves without re-running analysis • Notes visible in Session History listing
ACTIONS	
Primary actions	• Save session → saves to account history (enabled by default on report load) • Download PDF → generates and downloads a branded PDF of the full report

Secondary actions	- Edit session name → inline edit - Share report → generates a shareable link (public or private) - Add notes → focuses the notes field - Start Cycle 2 (Cycle 1 report only, if uses remaining) → /dashboard/elevator-script/new - Compare sessions (Cycle 2 report only) → /dashboard/elevator-script/compare/[id1]/[id2] - Back to Dashboard → /dashboard - Session History → /dashboard/history - Delete session → confirmation dialog → removes session and content from storage - Collapse / expand original script panel
NOTES & RULES	
Rules	- Report is saved to the user account automatically on generation. "Start Cycle 2" only appears on the Cycle 1 report, and only if at least 1 use remains. If counter is 0, it shows "Add more sessions" instead. - Score delta badges (Cycle 2) are derived by comparing element scores to the preceding session in the same product journey. - The "Your words" excerpt is taken directly from the submitted script. For Keynote-sourced text, the excerpt refers to the extracted text, not the original slide layout. - PDF download is branded with PitchCoach AI identity and includes all scores, excerpts, feedback, and rewrite suggestions. - Rewrite suggestions are AI-generated alternatives and are clearly labelled as such. They are suggestions, not definitive answers.

Screen 09 Session History

/dashboard/history

PURPOSE	
What this screen does	- Lists all saved sessions across all modules. Documented in full in the Pitch Deck Analyser Screen Inventory. - Product 2 specific difference noted below.
PRODUCT 2 DIFFERENCE	
Module filter	- When filtering by module, "Elevator Pitch Script Check" appears as a selectable option. - Filtered view shows both Cycle 1 and Cycle 2 M2 sessions, with a Cycle column for easy identification.
Session list columns	- Session name (linked to report) - Module: Elevator Pitch Script Check - Input method: Uploaded file ([filename]) or Pasted text - Date - Overall score (colour-coded) - Word count - Cycle (1 or 2) - Actions: View · Download PDF · Delete

ACTIONS	
Primary action	View session report → /dashboard/elevator-script/session/[id]
Secondary actions	- Download PDF (per session) - Delete session → confirmation dialog - Compare sessions → select two M2 sessions → /dashboard/elevator-script/compare/[id1]/[id2] - Create / manage folders - Filter by module / date / score

Screen 10 Session Comparison — Cycle 1 vs Cycle 2

/dashboard/elevator-script/compare/[id1]/[id2]

PURPOSE	
What this screen does	- Side-by-side comparison of two Elevator Pitch Script sessions — designed for Cycle 1 vs Cycle 2. - Provides the before-and-after evidence of improvement that is central to the product's value promise.
PAGE STRUCTURE & CONTENT	
Page heading	- Heading: Your improvement - Sub-heading: [Session 1 name] → [Session 2 name] - Date range: [Date 1] to [Date 2]
At-a-glance comparison stats	- Two overall scores side by side with delta badge - Word count: Session 1 vs Session 2 (e.g. "180 words → 145 words — more concise") - Estimated duration: Session 1 vs Session 2 (e.g. "2 min 10 sec → 1 min 28 sec") - Tone: Session 1 descriptor vs Session 2 descriptor
Element-by-element comparison	- Per element (5 elements): - Element name - Session 1 score bar - Session 2 score bar - Delta: +/- points - Found / Not found status for each session - Sorted by largest improvement at the top by default - Toggle: sort by framework order / sort by improvement
Tone comparison	- Session 1 vs Session 2 scores for Clarity, Confidence, and Conciseness side by side - Delta per dimension
Script comparison panel	- Collapsible panel — collapsed by default - Session 1 script and Session 2 script shown side by side in read-only panels - Allows visual comparison of the actual text changes made between cycles

Summary narrative	2–3 sentences summarising the overall change: what improved most, what still needs attention
ACTIONS	
Primary action	Download comparison PDF → generates branded PDF of the full comparison
Secondary actions	- View Session 1 full report → /dashboard/elevator-script/session/[id1] - View Session 2 full report → /dashboard/elevator-script/session/[id2] - Toggle sort order (by improvement / by framework order) - Expand / collapse script comparison panel - Back to Session History → /dashboard/history - Back to Dashboard → /dashboard

Screen 11 Add-on & Upsell

/dashboard/elevator-script/upgrade

PURPOSE	
What this screen does	- Shown when the user's Elevator Pitch Script Check counter reaches 0 and they attempt to start a new session. - Also triggered by the "Add more sessions" CTA on the dashboard or report screens. - Available to existing clients only.
PAGE STRUCTURE & CONTENT	
Context message	- Heading: You've used all your Elevator Pitch Script Check sessions "You completed [X] sessions. Your overall score moved from [Y] to [Z]. Here's how to continue."
Summary of completed sessions	Mini session history: last 2 M2 sessions with names, dates, scores, and word counts
Add-on options panel	- Option 1: Add 2 more sessions — price · CTA: Add sessions - Option 2: Add 4 more sessions — price · CTA: Add sessions (better unit price) - Note: "Discounted for existing clients"
Upgrade options panel	- Heading: Or take the next step - Relevant upgrade paths from Elevator Pitch Script Check: - Elevator Pitch Live (Product 3) — adds M3 live recording; practise saying what you've written - Master Pitch Analyser (Product 5) — adds M1 deck analysis; get feedback on deck and script together - Per card: product name, what is added, price, CTA: Upgrade
ACTIONS	
Primary action	Add sessions → payment flow → counter updated → /dashboard
Secondary actions	- Upgrade to Elevator Pitch Live → payment flow → /dashboard - Upgrade to Master Pitch Analyser → payment flow → /dashboard

	• Back to Dashboard → /dashboard • View Session History → /dashboard/history
NOTES & RULES	
Rules	• Only accessible to users with at least one completed M2 purchase. Not reachable by users without a purchase history. • Add-on pricing is lower per session than the original product price. • On successful purchase, the counter updates immediately and the user is redirected to /dashboard/elevator-script/new. • The upgrade paths shown are specifically chosen to be the most logical next product for a user who has completed the script-only journey — either adding live delivery practice (Product 3) or adding deck analysis (Product 5).
